Explore the cutting-edge of dissolution testing in an authoritative, one-stop resource. In Pharmaceutical Dissolution Testing, Bioavailability, and Bioequivalence: Science, Applications, and Beyond, distinguished pharmaceutical advisor and consultant Dr. Umesh Banakar delivers a comprehensive and up-to-date reference covering the established and emerging roles of dissolution testing in pharmaceutical drug development. After discussing the fundamentals of the subject, the included resources go on to explore common testing practices and methods, along with their associated challenges and issues, in the drug development life cycle. Over 19 chapters and 1100 references allow practicing scientists to fully understand the role of dissolution, apart from mere quality control. Readers will discover a wide range of topics, including automation, generic and biosimilar drug development, patents, and clinical safety. This edited volume offers a one-stop resource for information otherwise scattered amongst several different regulatory regimes. It also includes: A thorough introduction to the fundamentals and essential applications of pharmaceutical dissolution testing Comprehensive explorations of the foundations and drug development applications of bioavailability and bioequivalence Practical discussions about solubility, dissolution, permeability, and classification systems in drug development In-depth examinations of the mechanics of dissolution, including mathematical models and simulations An elaborate assessment of biophysically relevant dissolution testing and IVIVCs, and their unique applications A complete understanding of the methods, requirements, and global regulatory expectations pertaining to dissolution testing of generic drug products Ideal for drug product development and formulation scientists, quality control and assurance professionals, and regulators, Pharmaceutical Dissolution Testing, Bioavailability, and Bioequivalence is also the perfect resource for intellectual property assessors.

Although the Bioequivalence (BE) requirements in many global jurisdictions have much in common, differences in certain approaches and requirements such as definitions and terms, choice of comparator (reference) product, acceptance criteria, fasted and fed studies, single and multi-dose studies, biowaivers and products not intended for absorption into the systemic circulation (locally acting medicines and dosage forms), amongst others, provide food for thought that standardisation should be a high priority objective in order to result in a harmonized international process for the market approval of products using BE. An important objective of Bioequivalence Requirements in Various Global Jurisdictions is to attempt to gather the various BE requirements used in different global jurisdictions to provide a single source of relevant information. This information from, Brazil, Canada, China, European Union, India, Japan, MENA, Russia South Africa, the USA and WHO will be of value to drug manufacturers, regulatory agencies, pharmaceutical scientists and related health organizations and governments around the world in the quest to harmonize regulatory requirements for the market approval of generic products.

Carotenoids are a group of approximately 600 compounds synthesized by photosynthetic organisms. These pigments are abundant in fruits and vegetables, as well as in certain animal products such as eggs and salmon, being responsible for their colorful appearance. The bioactive properties of certain carotenoids in human health are clear, as some of these compounds have antioxidant properties and serve as the only precursors of vitamin A in nature. The aim of this Special Issue entitled “Carotenoids and Human Health” is to provide the scientific community with an updated perspective of this exciting and growing research area. We compiled 19 papers from some of the most prominent scientists in the carotenoid field, including seven literature reviews and 12 original publication, covering topics such as cancer, obesity, vision, cognitive function, and skin health.

These articles include recent research on ways to incorporate the noncognitive side of ability in economic theory and to empirically assess and explain its role in labor market and behavioral outcomes. Contributions investigate the extent to which assignment of workers is determined by traditional cognitive variables and by personality traits. Also presented in this collection is research on the role of noncognitive skills in explaining the labor market position of underrepresented groups and research that integrates the economic and psychological theory and evidence on noncognitive skills.

**Updates in Pediatric Otolaryngology**

Breast cancer is a disease requiring multidisciplinary management including surgery, medical and radiation oncology, radiology, pathology, nuclear medicine, genetic counseling, and psychological support. Each member of the team needs to be updated continuously on breast cancer treatment because of its rapidly changing nature. From the diagnostic procedures to operations and even in metastatic stages of breast cancer, surgeons play an essential part in multidisciplinary teams. After standard surgical options, oncoplastic breast surgery is rapidly becoming one of the most important surgical topics that should be learned by attending surgeons. The idea of writing this book stemmed from a collaboration between the European Academy of Senology (EaSoS), European Institute of Oncology (IEO), Euro-Asian Society of Mastology (ESOMA), and SENATURK (Turkish Academy of Senology), which have been working together to promote better training in breast care for professionals. The book offers invaluable support for breast surgeons by covering critical and essential information in senology. It will also greatly benefit the other members of multidisciplinary teams, surgery residents, gynecologists, and plastic and reconstructive surgeons.

Handbook of Pharmaceutical Manufacturing Formulations, Third Edition

This collection focuses on employer engagement in education, how it is delivered and the differentiated impact it has on young people in their progression through schooling and higher education into the labour market. The focus is not narrowly on vocational or technical education or work-related learning, but on how employer engagement (eg, work experience, internships, careers education, workplace visits, mentoring, enterprise education etc) influences the experiences and outcomes of the broad range of young people across mainstream academic learning programmes. The essays explore the different ways in which education can support or constrain social mobility and, in particular, how employer engagement in education can have significant impact upon social mobility – both positive and negative. Leading international contributors examine issues surrounding employer engagement and social mobility: conceptualisations of employer engagement; trends in social mobility; employer engagement and social class; access and management of work experience; social capital and aspiration; access to employment. The book makes employer engagement an innovative focus in relation to the well established fields of social mobility and school to work transition. By examining what difference employer engagement makes, the essays raise questions about conventional models and show how research drawing on different fields and disciplines can be brought together to provide a more coherent and convincing account. Building on new theorisations and combining existing and new data, the collection offers a systematic exploration of the influence of socio-economic status on school-to-work transitions, and addresses how educational policy can shape more efficient labour market outcomes. In doing so, it draws on, and speaks to, existing literature which has considered such questions from the perspectives of gender, ethnicity and social disadvantage.

This book is primarily a symptom-based guide to Breast and Gynecologic Imaging. Most clinical publications focus on a specific pathology such as "Imaging and/or management of ovarian cancer," but in clinical practice, patients do not present with a diagnosis. Physicians are presented with clinical symptoms, and appropriate use of imaging after a clinical assessment is critical from the point of view of effective intervention to treat a patient. CMS now mandates a clinical decision support system to justify imaging. This is based on making use of appropriate modalities for specific clinical problems that are deemed so by professional society guidelines. In an era of emphasis on cost effective, high quality health care delivery, it is critical for clinicians in training and practice to have a resource that outlines scientifically sound and professional society endorsed criteria for appropriate work up of patients' symptoms. This book applies this symptom-based approach to women's health. Authors are focused on providing a scientifically proven resource to gynecologists, obstetricians, radiologists and internists involved in the management of common symptoms affecting women. Each chapter is based on a common breast or gynecological problem and how patients are triaged for imaging. The implications of the findings and the most appropriate management of the patient are also presented. The text focuses on providing the most effective methods currently available to investigate commonly encountered symptoms in women's health. In addition, there are chapters that outline rationale of screening for breast cancer in women with an average risk and those with an elevated risk for breast cancer as well as a clinician guide to understanding multidisciplinary approach to the Breast cancer patient. This is an ideal guide for gynecologists, obstetricians, radiologists, and internists working in women's health.

Breast Surgery meets the needs of surgeons in higher training and practising consultants for a contemporary and evidence-based account of this sub-specialty that is relevant to their general surgical practice. It is a practical reference source incorporating the most current information on recent developments, management issues and operative procedures. The text is thoroughly referenced and supported by evidence-based recommendations wherever possible, distinguishing between strong evidence to support a conclusion, and evidence suggesting that a recommendation can be reached on the balance of probabilities. For this Sixth Edition the authorship team across the series has been expanded to include additional European and World experts, with an increased emphasis on global practice. Throughout all six volumes the contents have been extensively revised in line with recently published evidence. Detailed supportive key references are provided.
and are also included within the comprehensive list of references in the accompanying ebook. Links to recommended online videos have been added where appropriate. The Companion to Specialist Surgical Practice series provides a current and concise summary of the key topics within the major sub-specialties of general surgery. Each volume highlights evidence-based practice both in the text and within the extensive list of references at the end of every chapter. This new edition of Breast Surgery has a revised structure that better reflects the patient pathway through the breast service. New authors have brought new insights into rapidly evolving areas including more sophisticated breast assessment, the increasing options for breast conservation using oncoplastic techniques, and primary medical therapy. An emphasis on patient assessment and surgical techniques are the cornerstone of this revised edition.

Vascular Liver Disease: Mechanisms and Management covers all of the disease entities that stem from abnormalities that affect the hepatic vasculature. This multi-authored text includes the mechanisms and management of intrahepatic vascular disease, including the most common cause of vascular disease of the liver, cirrhosis. Other less common diseases of the liver vasculature are also covered such as sinusoidal obstruction syndrome (previously known as veno-occlusive disease), portal vein thrombosis, the Budd-Chiari syndrome and congenital vascular malformations. These entities, although rare, are a challenge to physicians and physician scientists. Although many textbooks have been written on the consequences of cirrhosis on the liver vasculature, this is the only volume that focuses on the liver vasculature as a separate entity, providing an innovative approach to liver disease management. Vascular Liver Disease: Mechanisms and Management will be of great value to clinical investigators and basic scientists interested in the liver circulation as well as clinical gastroenterologists and hepatologists, hepatobiliary surgeons and transplant surgeons, and to interventional radiologists with a particular interest in the liver.
